

ES is an electronic device that reduces the average electric consumption thus contributing in reducing the environmental impact. With **ES** the motor supplies its maximum power during the cutting phase only; energy consumption during the other phases is reduced. The blade keeps rotating always at the same speed and the pilot light changing colour is informing you if your slicer is working in **"ECONOMY"** or in **"POWER"** mode. **ES** turns OFF your slicer after 5 minutes idleness, in case you forgot it ON.

Tests have proved that **ES** determines an average energy saving of 40%.

ES is housed inside the watertight control box and it has no need of maintenance.

ES determines a reduction in motor heating thus improving its efficiency.
